

# CONNECT

**CONNECT** is a high yielding yellow fleshed variety that has medium sized, round-oval tubers with shallow eyes. Connect is medium-late maturing and is most suited for sandy and clay soil types. It is also highly suited for organic purposes due to its resistance to Phytophthora.

## Tuber Characteristics

- |                |            |
|----------------|------------|
| • Tuber Shape  | Round oval |
| • Flesh Color  | Yellow     |
| • Eye Depth    | Shallow    |
| • Skin Color   | Yellow     |
| • Skin Texture | Smooth     |
| • Dormancy     | Very good  |
| • Tuber Size   | Large      |

## Resistances

- |                  |             |
|------------------|-------------|
| • Scab           | Medium-low  |
| • PVY            | High        |
| • Foliage Blight | High        |
| • Tuber Blight   | High        |
| • Damages        | Medium-high |
| • Bruising       | Medium-high |
| • Nematodes      | -           |

## Yield and Quality

- |                    |              |
|--------------------|--------------|
| • Yield            | High         |
| • Tubers per plant | 13-15        |
| • Cooking Type     | Fairly mealy |
| • Dry Matter       | 20.5%        |

## Remarks

- Most suited to sandy and clay soils
- Medium early maturing
- Has heat and drought tolerance
